

BASIC INFORMATION ABOUT THE PRODUCT

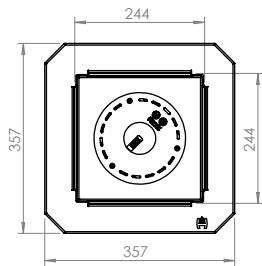

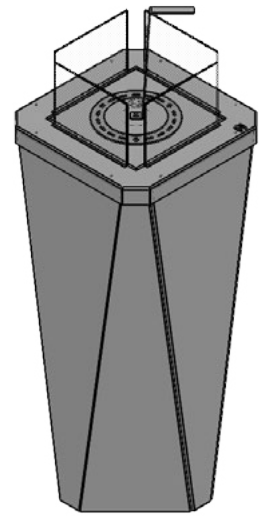

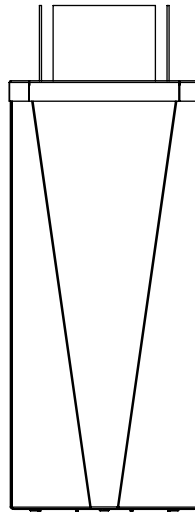

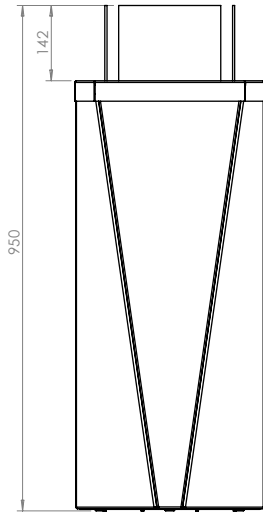

Fuel Type	Bioethanol
Maximum capacity of the bio-insert (l)	0.8
Fuel consumption (l/h)	0.27
Material of construction	P265GH according to EN 10028-2
Surface finish	High temperature powder paint
Weight (kg)	22.5
Dimensions width x height x depth (mm)	357x950x357

Discover LESTE - a bio-fireplace that is the essence of unprecedented elegance and modernity, introducing not only a source of heat but also a unique decorative element to your space. This original and unique model of bio-fireplace was designed for those who want to combine functionality with a refined style.

The LESTE bio-fireplace, inspired by garden heaters, will certainly work well in indoor and outdoor spaces thanks to its stable base. It is an excellent alternative to traditional fireplaces or wood and gas heaters, integrating harmoniously into both modern and classic spaces. The ability to admire the „dancing flames“ from all sides and four-sided glazing that protects against direct contact with fire make the LESTE bio-fireplace for biofuel not only safe, but also ecological, manufactured in accordance with the European standard EN 16647. The offer of additional equipment includes many decorative elements, such as ceramic pieces of wood, various types of decorative stones and proprietary fiber that imitates the effect of embers.
